

Symphony Integrations

Microsoft Office

Go real-time, all the time

Organizations use Symphony's real-time chat, screen-sharing and audio/video conferencing to solve more problems and get more done, faster. When employees have to return to Microsoft Outlook/Exchange, however, productivity often grinds to a halt.

Outlook/Exchange users:

- Must switch between screens, copy and paste from Microsoft applications to Symphony, and disrupt their otherwise fast, efficient, real-time workflows.
- Are not able to view the presence status of their colleagues on Symphony and vice-versa.
- Cannot invoke 3rd party VoIP clients like Symphony or Cisco Jabber from within Outlook.

Benefits

- Simplify workflows by seamlessly integrating Symphony with Microsoft Outlook/Exchange, presence and VoIP clients.
- Leverage existing investments in Microsoft applications to create new value by bringing Symphony's real-time capabilities to Microsoft Office.
- Provide choice to users who want to continue using Microsoft Outlook/Exchange but also need a real-time secure team collaboration platform like Symphony.

Solutions with Symphony for Microsoft Office

Now, organizations can integrate Microsoft Outlook/Exchange and 3rd party VoIP clients with Symphony!

1 Move Outlook Email Conversations to Symphony

Trying to resolve a question in a never-ending email chain?

Move everyone in the thread to a Symphony collaboration room with one click, and start communicating in real time. Users are added automatically to the Symphony chat room.

2 Access Symphony from within Outlook

Hover over any user's Office contact card to launch Symphony chat, audio/video conferencing and screen-sharing with a click.

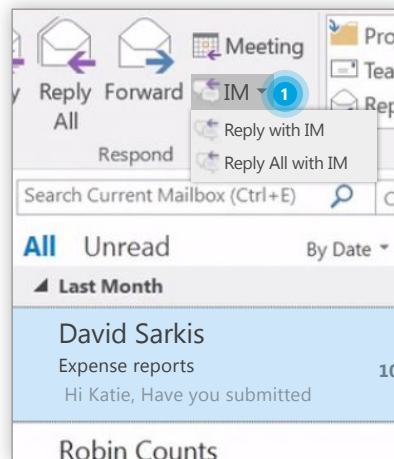

3 Access VoIP clients from within Office Contact Card

Hover over a user's card to launch Symphony audio or other VoIP clients like Cisco Jabber.

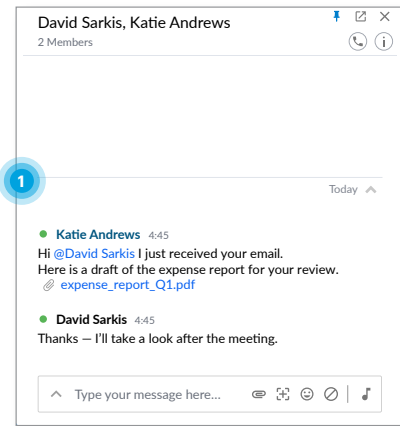

4 Simplify workflows

Hover over a user's card to launch Symphony audio or other VoIP clients.
