How Can You Create a Better Content Consumption Experience on Symphony?

Users are leveraging Symphony to automatically curate tagged content into relevant feeds for topics they're interested in. At Symphony Innovate 2017, T. Rowe Price and RBC demonstrated how signals and the [Symphony Idea Engine](#) reduce information overload prevalent across Sales & Trading, Research, Portfolio Management, and a range of other groups that exchange views & content.

In the demo, they showed how users can reduce the time-consuming work of sorting through chats and emails in order to find the relevant content, while content senders gain the ability to receive feedback on what their counterparts are interested in. The Symphony Idea Engine allows a user to quickly select topics they're interested in as well as the people they want those updates from. These preferences become a curated feed in the form of a signal. The Symphony Idea Engine can also save time with auto-tagging (powered by Selerity). This means that our users can start getting more relevant content, faster, as well as understand what their counterparts are interested in.

Symphony Highlight Corner:

"Thousands of people can create change by putting their hands on a keyboard and creating a piece of software...Hats off to the Symphony community, it's already personally inspired me." - Elisha Wiesel, CIO of Goldman Sachs

Symphony in the News:

There has been an exciting development in the open source community. Last week, both Symphony and Deutsche Bank announced major code contributions to the Symphony Software Foundation. Learn more about [Symphony's](#) & [Deutsche Bank's](#) contributions.
