

Highlights from Symphony Innovate Asia

We hosted our first Symphony Innovate Asia conference in Hong Kong last week! **Over 300 attendees from 100+ companies** walked away with insights and ideas on how to best leverage Symphony for secure team collaboration.

- The Opening Keynote:** David Gurlé, Founder & CEO of Symphony, opened the day with the “Social Operating System” and brought executives from GAMA, Thomson Reuters, Nikkei, CLSA, and ANZ on stage to demonstrate their Symphony integrations - **live!**
- The Community in Action:** We announced that our customers have developed 500+ unique bots using Symphony’s open APIs. We got to see some of these in action with live demos from customers and partners like BNY Mellon, Deutsche Bank, Natixis, J.P. Morgan, and Google. From pre-trade to post-trade workflows, these bots **wowed the audience**.
- Why Security Matters:** Symphony’s CSO & CTO demonstrated how a seemingly “secure” chat platform can be easily hacked with **your data readable** in clear text. However with the same hacking attempt on Symphony, your data remained **encrypted and undecipherable**.

Be sure to check out our **blog** and visit our **conference replay page** to catch what you missed!

*Want to come to the next Symphony Innovate conference? Registration for **Symphony Innovate 2018 in New York** opens in July so contact your Symphony representative now to secure your invite!*

Symphony Innovation Award Winners

More than half of our customers currently use bots to automate workflows on Symphony. The Symphony Innovation Award recognizes cutting-edge bots and applications that are improving workflows across the Symphony community. We are thrilled to announce the first recipients of this award:

Trade Butler Bot, ANZ Banking Group: automates trade validation, resulting in an 81% reduction of risk events linked to incorrect trade booking.

Symphony Data Layer, ipushpull: delivers live data from external applications without sharing files, leveraging Symphony's security model and keeping your data secure.

Read more about their developments in our latest **press release**. If your development teams have created a bot or application that transformed the way you use Symphony, nominate it **here**.
